[Kid Science: Make a Mini Water Filter](#)

Soil erosion is the washing or blowing away (by water or wind) of the top layer of soil. This is the serious problem for farmers. If the soil washes away or erodes, the crops that

make food will not grow well. Erosion can also weaken buildings and even cause them collapse.

Causes of Soil Erosion:

Heavy rains, strong winds, storm, deforestation (cutting of trees), glacier, over cropping.

Effect of Soil Erosion

1. It reduces soil quality and nutrients from soil are lost.
2. Poor soil quality causes limited crops yield.
3. Farmers have use pesticides and more fertilizers. Use of pesticides causes water pollution also.

Observation sheet on soil erosion.

Music:

I see trees of green
Red roses too
I see them bloom
For me and you
And I think to myself
What a wonderful world

Part 2

I see skies of blue
And clouds of white
The bright blessed day
The dark sacred night
And I think to myself
What a wonderful world
