Albert Einstein

Albert Einstein was born on March 14, 1879 in Germany. He is known throughout the world as one of the greatest scientists. He was a genius.

When he was born his head was bigger than the rest of his body. His mother was very frightened because her son's head was so strangely big. As he grew up it became less noticeable. Another strange thing about Einstein was that he only started to speak when he was three years old and was very quiet even then until he was nine years old. Einstein was indeed a very strange child compared to most other children.

At age twelve Einstein learned complex mathematics on his own. He was very bored with the simple work at school. He always wanted to learn more and more. So, besides learning at school, he loved studying on his own. He read a lot of books that were not in the school course. A lot of people began to think Einstein was very stupid because he did not do so well in his school subjects. What they did not know was that he was too intelligent for the school work they gave him.

Read the passage and connect with Learner Profile and skill that Einstein demonstrated.

ART

Task

Learners will draw and colour different types of discovers of telephone.
